

IMPULSE

 **WORKLYFFE[®]**

The Impulse Chair is a refined task seating solution engineered for people who spend long hours at their desk and expect more from their chair. Designed with fluid, responsive movement and intuitive support, it brings together advanced ergonomics with a clean, understated aesthetic. Every element — from the recline to the seat foam — has been shaped to reduce pressure, encourage healthy posture, and move in sync with the user. Impulse represents a shift in task seating: one that doesn't rely on overcomplicated adjustments, but instead adapts naturally to the body in motion.

Highlights:

A responsive chair that moves with the user, not against them

Clean design language suited for focused environments

Crafted for long-term support without unnecessary complexity

Camira Shrinx mesh is shaped to support all user's lumbar without needing a clunky support mechanism on the back.

Thin rubber arm pads are soft enough for elbow comfort and durable enough to resist wear seen on foam pads.

A molded foam seat is shaped to relieve stress points, especially behind the knees.

Arm height adjustment

Seat height adjustment

Seat depth adjustment

Hidden tension
adjustment for factory
and field-tech use

Impulse is designed for people who want their chair to work intelligently — without the constant need for manual calibration. Its mechanism automatically adjusts to the user's weight and posture, delivering seamless recline support. The unique motion keeps the head centered over the shoulders while reducing pressure behind the knees. Camira Shrinx mesh forms naturally to the back, eliminating the need for bulky lumbar hardware. The molded foam seat is shaped for comfort over hours of use, and the armrests are finished in thin, durable rubber for lasting softness. Impulse is smart, silent, and supportive — everything a task chair should be.

Highlights:

Weight-responsive recline requires no user input

Balanced posture and pressure relief, especially behind the knees

Designed for everyday durability, comfort, and movement

A fully upholstered version utilizing Gabriel ShapeKnit has been explored and could be offered.

Thank you.
